

ABSTRACT OF THE DISCLOSURE

MHP TELEVISION DEVICE AND GUI APPLICATION

An MHP television device including a user input and a GUI
5 application for use in such a device wherein the GUI
application maintains at least one notional wheel to
which activities and strings for representing the
activities may be assigned and generates an image for
display, the image including an edge of the notional
10 wheel on which a predetermined number of the strings are
arranged for display, the GUI application being
responsive to the user input both to rotate the notional
wheel so as to display different strings and to select
any activity represented by a string on the notional
15 wheel at a predetermined position of the image.
